

Alazar Tadesse

Software Engineer | Fullstack web and mobile applications developer

📍 Addis Ababa, Ethiopia ✉ mealazartadesse@gmail.com ☎ +251988471703 🔗 alazar-dev
🌐 darling-manatee-ed72e4.netlify.app/

Detail-oriented Software Engineer with 4+ years of experience building and maintaining 10+ scalable web and cross-platform mobile applications, consistently delivering high-quality solutions that improve system performance, security, and user engagement. Proficient in JavaScript/TypeScript, React, Node.js, and microservices architectures orchestrated with Docker, with proven experience designing robust backend systems, authentication flows, SMS gateways, and digital ID integrations. A strong advocate for clean, maintainable, and well-tested code, applying best practices, modular design, and automation to drive efficiency and reliability. Adept at collaborating across cross-functional teams—both remote and on-site—to deliver business-focused, impactful software. Passionate about modern engineering practices, solving complex technical challenges, and contributing to digital transformation through secure, scalable, and user-centered solutions.

Skills

- **Technical Skills:** Web applications, System monitoring, Microservices architecture, Docker, Documentation, Scalable services, Mobile applications, Restful API
- **Soft Skills:** Communication, Team Leading
- **Tools:** React.js, Next.js, Node.js, Nest.js, Figma, MaterialUI
- **Languages:** Javascript, Typescript, php, Golang

Professional Experience

Software Engineer

AY Automate

Nov 2025 - Mar 2026
Casper, Wyoming, United States

- Built scalable full-stack applications using Next.js, React, Node.js, and NestJS
- Developed and integrated **AI-powered systems**, including autonomous agents, voice assistants, and intelligent automation workflows
- Engineered **web scraping and data analysis pipelines** to collect, process, and extract actionable insights from large datasets
- Designed high-performance APIs and implemented secure authentication (JWT, OAuth), integrating services like Stripe and Google OAuth
- Improved system reliability and scalability through performance optimization, debugging, and architectural enhancements

Software Engineer

National ID Program Ethiopia

Oct 2022 - Oct 2025
Addis Ababa, Ethiopia

- Built and deployed **5+ web applications** for system monitoring, enabling real-time data visualization, alerting, and performance tracking across mission-critical services.
- Contributed to the design and implementation of **microservices architectures**, fully containerized and orchestrated with **Docker** to ensure scalability, reliability, and streamlined deployments.
- Developed clean, maintainable, and well-documented code in **JavaScript** and **TypeScript**, following best practices including modular design, code reusability, automated testing, and continuous integration workflows.
- Collaborated with cross-functional teams—engineering, infrastructure, and operations—to deliver secure, high-performance solutions supporting the national digital ID ecosystem.

Software Engineer

Bitappstech Technology

Mar 2022 - Oct 2022
Addis Ababa, Ethiopia

- Designed, developed, and maintained web applications and **reusable UI components** using **React** and **Laravel**, following clean architecture principles and industry best practices.
- Contributed to **Yeneta School**, a comprehensive School Management System, implementing key features including **student management, attendance tracking, and academic reporting**.
- Collaborated with cross-functional teams to build **scalable backend services** using **Node.js** and RESTful APIs, ensuring robust communication between frontend and backend systems.
- Built and deployed the company's **blog website** as a side project, improving brand presence and providing a platform for content distribution.

-
- Developed and maintained **web-based systems** and **cross-platform mobile applications**, ensuring consistent functionality and performance across devices and platforms.
- Built **responsive, reusable UI components** using **React** and **Material UI**, delivering smooth user experiences and maintaining a cohesive design system.
- Implemented performance optimizations and user-driven feature enhancements using **Node.js**, improving system responsiveness and supporting evolving business requirements.
- Collaborated closely with cross-functional teams to produce **clean, maintainable, and production-ready code**, aligned with industry best practices and project standards.

- Developed and maintained diverse client websites and applications, including **ride-hailing platforms** and **inventory management systems**, delivering customized, business-aligned solutions.
- Built responsive and user-friendly interfaces while implementing scalable backend functionality to support real-time operations and data workflows.
- Collaborated with clients and internal teams to gather requirements, propose technical solutions, and deliver high-quality software within project timelines.

Projects

Digital ID Wallet

January 2025 - June 2025

<https://play.google.com/store/apps/details?id=et.fayda.nidfaydaApp&hl=en&pli=1>

Tools: INJI (Open Source), National ID Systems, Custom Integrations, Secure Identity Management

- Customized the open-source **INJI Digital ID Wallet** to work seamlessly with Ethiopia's National ID holder repository and local identity verification workflows.
- Integrated wallet features with national ID data structures, authentication flows, and security policies to ensure compliant and secure digital identity storage.
- Enhanced user experience and system functionality by adapting INJI's modules for local requirements, including personalized ID profiles, offline verification, and secure QR-based identity sharing.
- Collaborated with backend and identity teams to ensure accurate data mapping, encryption handling, and interoperability with existing government systems.

SMS Notification System (Enterprise-Scale Messaging Platform)

November 2021 - January 2022

- Internal system integration

Tools: Jasmin SMS Gateway, SMPP, REST API, Linux, Networking, Dashboarding

- Built a **middleware RESTful API** that bridges Fayda's client applications with Jasmin, handling message queuing, validations, retries, telecom fallbacks, and real-time delivery reporting.
- Worked closely with infrastructure and networking teams to configure servers, firewall rules, load balancers, and secure telecom connections, ensuring a **high-availability 24/7 system**.
- Developed **real-time monitoring dashboards** for SMS traffic, connector health, queue depth, and system performance with automated alerts for failures or latency spikes.
- Ensured end-to-end reliability by optimizing throughput, managing telecom compliance requirements, and conducting stress tests for large-scale message delivery.
- Implemented and customized the **Jasmin SMS Gateway** on on-premise infrastructure, adapting its SMPP connectors, routing, and DLR handling to work seamlessly with **Ethiotelecom** and **Safaricom Ethiopia**.

Biometric Authentication System

February 2024 - July 2024

<https://www.npmjs.com/package/fingerprint-scanner>

Tools: OpenCV, Node.js, NPM, Biometrics Processing, REST APIs

- Implemented a **biometric authentication system** that verifies customer identities across multiple services using Fayda's national biometric database.
- Integrated **OpenCV** to capture, preprocess, and match biometric data (fingerprints/face), ensuring high accuracy and fast processing.
- Developed and published an NPM package (**fingerprint-scanner**) to abstract the biometric capture workflow, providing a clean API for acquiring, cleaning, and structuring biometric data across client applications.

- Designed secure REST endpoints and validation logic to manage biometric capture, storage, and authentication in a consistent and standardized format.
- Improved system reliability and developer productivity by centralizing biometric utilities into a reusable library used across internal and external projects.

Meet Ginger AI – Candidate Management AI Platform

January 2025 - November 2025

<https://meetginger.ai/>

- Developed a **full-stack AI-powered candidate management platform** that automates client and candidate registration, resume review, and candidate scoring.
- Built **intuitive dashboards** for recruiters and clients to track applications, view AI-generated insights, and make informed hiring decisions.
- Designed and implemented **backend APIs** and integrated a **cloud database** hosted on **AWS** to securely manage candidate and client data.
- Incorporated **AI-driven assessment algorithms** to evaluate resumes and simulate interviews, providing candidate scoring and shortlisting recommendations.
- Enhanced the hiring workflow by automating candidate selection, reducing manual review time, and improving recruitment efficiency.

EditKits – Multimedia Editing Web Application

October 2024 - April 2025

<https://www.editkits.com/>

Tools & Tech: Next.js, React, Node.js, REST APIs, Cloud Storage, Dashboarding

- Developed a **Next.js web application** capable of editing **images, videos, and audio files** across multiple formats with high performance.
- Built a **real-time dashboard** to track every process, monitor job status, and visualize outputs for users.
- Designed a scalable architecture to handle **multimedia processing workflows**, ensuring reliability and fast turnaround.
- Implemented reusable components and modular code for **extensibility**, allowing the platform to support new multimedia formats and editing features.

Certifications

Google Introduction to: Git & GitHub – Coursera

March 2021

<https://www.coursera.org/account/accomplishments/verify/MBWNYKV7BSCK>

- Gained hands-on experience in **version control with Git**, **collaborative workflows using GitHub**, branching strategies, merging, and resolving conflicts.
- Learned best practices for **code management**, collaborative development, and maintaining **reliable, production-ready codebases**.

Server-side Development with Node.js, Express, and MongoDB – The Hong Kong University of Science and Technology, Coursera

September 2021

<https://www.coursera.org/account/accomplishments/verify/GLEYTBJNVD3V>

- Gained hands-on experience building **RESTful APIs** with **Node.js** and **Express**, and managing **MongoDB databases**.
- Learned to design and implement **server-side logic**, data persistence, and scalable backend architectures.

Advanced React – Meta (Coursera/Official Program)

January 2023

<https://www.coursera.org/account/accomplishments/verify/6QEP5WLR2A3G>

- Gained in-depth knowledge of **React concepts**, including hooks, state management, context API, performance optimization, and building **scalable, reusable UI components**.
- Learned best practices for **modern frontend development** and **complex React application architecture**.

Introduction to Mobile Development – Meta (Coursera/Official Program)

September 2022

<https://www.coursera.org/account/accomplishments/verify/Y9MSD5LRG7SN>

- Learned the fundamentals of **mobile app development**, including UI/UX design, platform-specific considerations, and app lifecycle management.
- Gained hands-on experience in building **responsive, cross-platform mobile applications**.
